

PRESIDENCY SCHOOL

R T NAGAR, BANGALORE

Subject: Social Studies (SST) | Grade: IV | Chapter: The Southern Plateau

WORKSHEET 2 — COMPLETE SOLUTION KEY & STUDY NOTES

Name: _____ Section: _____ Roll No: _____ Date: _____

I. FILL IN THE BLANKS

- i. A high, flat landform is called a plateau.
- ii. A plateau is also called a tableland.
- iii. The Southern Plateau is also known as the Peninsular Plateau.
- iv. The Narmada River separates the Central Highlands from the Deccan Plateau.
- v. The Southern Plateau has two main divisions: Central Highlands and Deccan Plateau.
- vi. The Chota Nagpur Plateau is rich in minerals.
- vii. Anamudi is the highest peak of the Deccan Plateau.

II. CHOOSE THE CORRECT ANSWER

- i. The Southern Plateau is mainly found in:
Options: a) Northern India ☐ b) **Peninsular India** c) Coastal India
Correct Answer: b) Peninsular India
- ii. The Deccan Plateau lies mainly to the _____ of the Narmada.
Options: a) North ☐ b) **South** c) East
Correct Answer: b) South
- iii. Which is a major river of the plateau?
Options: ☐ a) **Godavari** b) Yamuna c) Sutlej
Correct Answer: a) Godavari
- iv. Which soil is suitable for growing cotton?
Options: ☐ a) **Black soil** b) Sandy soil c) Desert soil
Correct Answer: a) Black soil
- v. Which is a mineral?
Options: a) Rice ☐ b) **Coal** c) Cotton

Correct Answer: **b) Coal**

III. MATCH THE FOLLOWING

Column A	Column B (Original)	Correct Match & Solution
i. Narmada	a. Cotton	c. Divides the plateau (i → c)
ii. Malwa Plateau	b. Highest peak	e. Central Highlands (ii → e)
iii. Chota Nagpur Plateau	c. Divides the plateau	d. Minerals (iii → d)
iv. Anamudi	d. Minerals	b. Highest peak (iv → b)
v. Black soil	e. Central Highlands	a. Cotton (v → a)

IV. ANSWER BRIEFLY

i. Why is a plateau called a tableland?

Ans: A plateau is called a tableland because it is an elevated area of flat, level land that rises sharply above the surrounding area, resembling the flat top of a table.

ii. Name the two divisions of the Southern Plateau.

Ans: The two main divisions of the Southern Plateau are:

1. **The Central Highlands** (lying to the north of the Narmada River)
2. **The Deccan Plateau** (lying to the south of the Narmada River)

iii. Name any two rivers of the plateau.

Ans: Two major rivers of the Southern Plateau region are the **Narmada** and the **Godavari** (other examples include Krishna, Kaveri, Tapi, and Tungabhadra).

iv. Name any two crops grown in the plateau region.

Ans: Two important crops grown in the plateau region are **cotton** and **groundnut** (along with millets, sugarcane, pulses, tea, and coffee).

v. Name any two minerals found in the plateau region.

Ans: Two vital minerals found in the plateau region are **coal** and **iron ore** (along with manganese, bauxite, mica, and gold).

vi. Name any two states of the Southern Plateau.

Ans: Two states located in the Southern Plateau region are **Karnataka** and **Madhya Pradesh** (along with Maharashtra, Jharkhand, Chhattisgarh, Odisha, Telangana, Andhra Pradesh, and Tamil Nadu).

V. THINK AND ANSWER

i. How do soil and rainfall affect farming in the plateau region?

Ans: Soil and rainfall strongly influence the types of crops grown in the plateau:

- **Soil Impact:** The region is rich in fertile **black soil** (which holds moisture well and is ideal for growing cotton, sugarcane, and oilseeds) and **red soil** (suitable for groundnut, millets, and pulses).
- **Rainfall Impact:** High rainfall areas like the Western Ghats support lush plantation crops (tea, coffee, and rubber), whereas drier interior areas rely heavily on rainfall, dams, and tank irrigation to sustain crops during dry spells.

ii. How do minerals help in the growth of industries?

Ans: Minerals are essential raw materials that power industrial development:

- Minerals like **coal** provide energy for thermal power generation and factories.
- Minerals like **iron ore** and **manganese** serve as foundational inputs for heavy industries like steel mills (e.g., Bokaro and Jamshedpur steel plants).
- The abundance of minerals attracts capital, creates large-scale manufacturing jobs, and drives economic development in the region.

iii. How do the physical features of the Southern Plateau affect people's occupations and lifestyle?

Ans: The unique physical features directly dictate occupations, culture, and daily life:

- **Occupations:** People in fertile river basins and black soil plains practice **farming**; those in mineral-rich areas (like Chota Nagpur) work in **mining and heavy manufacturing**; forested hill slopes encourage **plantation farming** and forestry.
- **Lifestyle:** Villages and cities develop near water bodies, rivers, and industrial belts. Housing materials, food habits (rice, millets), and clothing reflect the warm climate and local natural resources.

iv. Why is the Southern Plateau important to India?

Ans: The Southern Plateau is of immense economic and geographic importance to India:

1. **Mineral Storehouse:** It contains the bulk of India's valuable mineral wealth (coal, iron ore, bauxite, mica, and gold).
2. **Agricultural Hub:** It is a leading producer of cash crops like cotton, oilseeds, sugarcane, tea, coffee, and spices.
3. **Hydroelectricity & Water:** Fast-flowing rivers descending from heights (e.g., Sharavati at Jog Falls) are harnessed to generate hydroelectric power and supply irrigation.
4. **Industrial Backbone:** It houses key industrial cities (Bengaluru, Hyderabad, Pune, Jamshedpur) that drive technology, manufacturing, and trade.

CHAPTER STUDY NOTES & QUICK SUMMARY (UNIT ASSESSMENT REF)**I. What is a Plateau?**

- A plateau is a high, flat landform that rises above the surrounding land.
- It looks like a flat table top, which is why it is also called a **tableland**.
- The Southern Plateau is also referred to as the **Peninsular Plateau**.

II. Location & Divisions

- Located in southern and central India, triangular in shape.
- The **Narmada River** divides the plateau into two main parts:
 1. **Central Highlands** (North of Narmada)
 2. **Deccan Plateau** (South of Narmada)

III. Central Highlands

- Includes the **Malwa Plateau** in the north-west and the **Chota Nagpur Plateau** in the north-east.
- The Chota Nagpur Plateau is extremely rich in mineral deposits.

IV. Deccan Plateau

- The largest division of the Southern Plateau, lying south of the Narmada River.
- **Anamudi** is the highest peak in the Deccan Plateau (located in the Nilgiris).

V. Major Rivers

- West-flowing rivers: **Narmada** and **Tapi** (drain into the Arabian Sea).
- East-flowing rivers: **Godavari, Krishna, Kaveri, Mahanadi** (drain into the Bay of Bengal).
- These rain-fed rivers provide water for farming, dams, and hydroelectric power.

VI. Soil, Crops & Industries

- **Black Soil:** Excellent for cotton and sugarcane.
- **Other Crops:** Millets, groundnut, rice, tea, coffee, and rubber.
- **Key Minerals:** Coal, iron ore, manganese, bauxite, and gold.
- **Occupations:** Farming, mining, animal rearing, and industrial jobs.
