

My Teeth

Structure of the human tooth

I Keyword

1	Milk teeth	Milk teeth
2	incisors	incisors
3	canines	canines
4	Pre-molar	Pre-molar
5	molar	molar
6	Cementum	Cementum
7	Enamel	Enamel
8	Crown	Crown
9	Cavity	Cavity
10	Gum	Gum
11	Dentistry	Dentistry

12 Jawbone / Jawbone

13 Dentine / Dentine ✓

II Answer the following :

1. Differentiate between milk teeth and permanent teeth.

Milk teeth

Permanent teeth

* The first set of teeth ^{that} appears in early childhood. This is the second set of teeth which replaced the milk as they fall out.

* 20 in number

* 32 in number ✓

2. Name ~~the four different types~~ of teeth?

2. Explain the structure and function of incisor, Canines, premolars and Molars.

Ans.	Types of teeth	Structure	Functions
*	Incisors	Sharp and flat edges	To cut & bite the food
*	Canines	Sharp and pointed teeth	To Tear food
*	Premolars	Broad and flat teeth	Crush the food and break down into fine pieces
*	Molars ✓	broader than premolars ✓	Crush and grind food into a fine paste. ✓

3 By age 3, children have 20 milk teeth and are replaced by 32 permanent teeth. Why do you think we need more teeth as we grow older? ✓

Ans We need more teeth as we grow older for these reasons:

a) Our jaw becomes much bigger as we grow from age 3 to 13, so there is space for more teeth.

b) As we grow, we eat harder and tougher foods that need more grinding and ^{chewing} power.

4 Some people use twigs from neem or babul trees to brush their teeth. How do they do this?

Ans The twig is first ^{chewed} ~~cleared~~ to change it into a soft brush. Chewing exercises the teeth and gums. The juice from the twig is known to kill germs. In the end, the twig is sliced into two and is used to clean the ~~the~~ tongue.

5 Enamel is the hardest material in the human body. If it is so hard and strong, why do we still get cavity?

Ans Enamel is very hard and strong. When germs feed on the sugar that is present in the food stuck on our teeth, they produce a kind of acid. This acid slowly damages the enamel and creates ~~holes~~ holes called cavities.

III Give reasons :

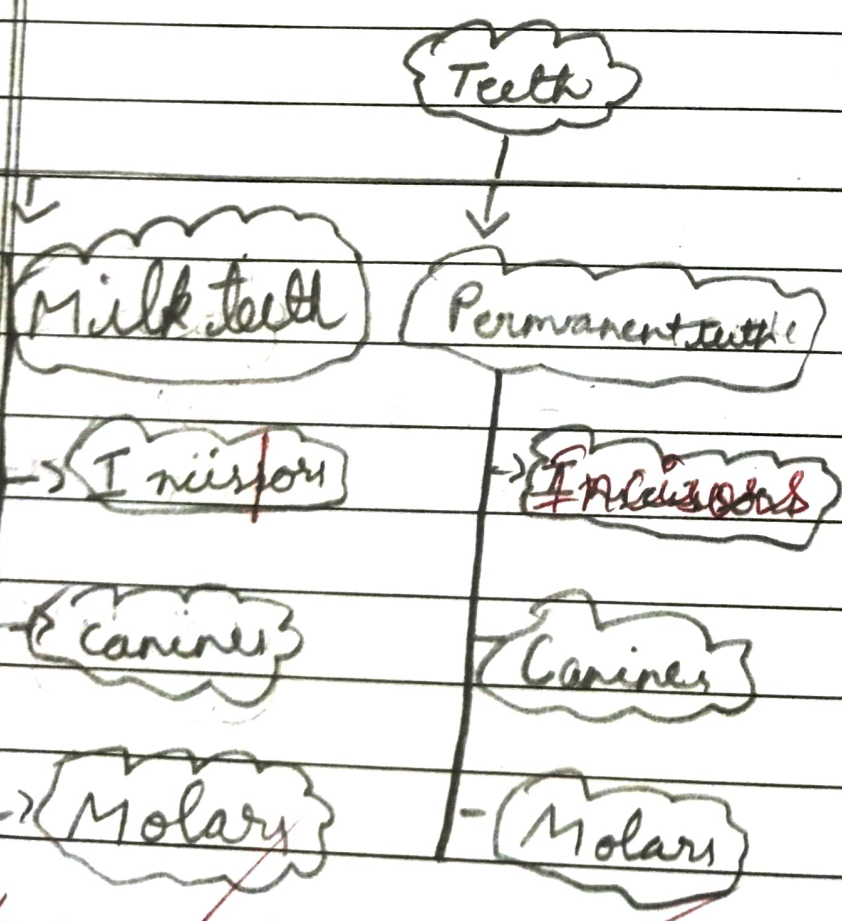

1 Neha got all her new teeth she has lost when she was 6 years old. But her father who lost his teeth in an accident did not get new teeth in that place.

Ans Neha's teeth were temporary. That are replaced by permanent teeth. Her father's teeth were permanent teeth that do not grow back once lost.

2 we should not eat anything after ^{brushing} ~~brushing~~ the teeth in night.

Ans Eating after brushing at night causes germs to collect on our teeth during sleep. This leads to formation of cavities. We should avoid eating to avoid germs and formation of cavities.

IV Concept Map :

Dental formula

Milk teeth
 Incisors $E=2$
 Canines $C=1$
 Molars $M \times 2 = 20$
 $\begin{bmatrix} 2 & 1 & 2 \\ 2 & 1 & 2 \end{bmatrix} \times 2 = 20$
 Permanent Teeth
 Incisors $E=2$
 Canines $C=1$
 Molars $M \times 2 = 20$
 $\begin{bmatrix} 2 & 1 & 2 & 3 \\ 2 & 1 & 2 & 3 \end{bmatrix} \times 2 = 28$
