11 Answer the following :

1 What do you mean by renewable and Non-renewable resources?

Ans Renewable resources are the ones which are continuously being renewed by natural process while the non renewable

Q.2

Why must non-renewable resources be used more carefully than renewable resource?

Ans

We must use non-renewable because they don't ~~form~~ at the time they are lost and take a long time to ~~form~~ ^{it takes} 100 million years to ~~form~~ ^{form} and then renewable resources ~~form~~ back once they are ~~lost~~ ^{used} up. ✓

2

Trash burn smoke fills parks & city the steps to stop it.

Ans

The following steps can prevent air pollution

- segregation of waste

- provide proper disposal bin

- educate ~~people~~ ^{people} about harmful effects of air pollution

* Display "No garbage Burning" signs.

What actions can prevent water pollution and help in conserving water? Write four points.

Ans To conserve ^{water,} we should avoid dumping garbage in water bodies. we should ensure that the ~~sewage~~ water is not thrown in the water sources, reduce the use of detergent ~~soaps~~ and avoid wasting water.

Q How does polluted water affect human and aquatic life?

Ans Polluted water causes water borne ~~diseases~~ like cholera, dysentery, typhoid and hepatitis A in humans. Aquatic animals and plants cannot live in polluted water.

HW

A park has many dry leaves. Instead of burning them, what should be done? Why?

Ans We should not burn dry leaves and recycle them to make them a new thing. if can't give them to recycle you see a recycling truck give them the dry leaves from the park and clean it

5 How do plants help in soil conservation?

Ans Roots of plants hold soil particles together and prevent soil from being carried away by wind and flowing water.

6 Why should forests be protected?

Ans Forests should be protected as they provide habitat for plants and animals. They can clean the air and influence the rainfall.

influence the environment.
