14	Axis	Axis
15	Orbit	Orbit

II Define:

- 1 Rotation - The movement of the earth about its axis.
- 2 Revolution - The movement of the earth around the sun on its orbit.
- 3 Monsoon - The winds that blow from the Indian Ocean during the monsoon.

season

III Answer the following

1. During Summer, people avoid going out in the afternoon. Which property of the sun's rays causes this situation?

Ans In the summer, the Sun's rays fall straight and give more heat making afternoon very hot.

- 2 We wear woollen clothes in winter. How is this related to the position of the sun and the length of day?

Ans In winter, the days are shorter and the sun remains in sky a shorter time. The sun's rays are slanting and give less heat, so we feel cold and wear woollen clothes.

Why is summer experienced in India when Australia has winter?

Ans When India is Tilted towards the sun, it receives more heat and has summer. At the same time, Australia is tilted away from the sun and has winter.

4 Why is rainy season placed between summer and winter?

Ans The rainy season comes after summer because monsoon winds blow during late summer and bring rain before winter begins.

5 Why does the temperature drop quickly after sunset in winter compared to summer?

Ans In winter, the sun gives less heat and stays for a shorter time.

PAGE NO. 52

DATE / /

After sunset, the heat is lost quickly
making it colder.
