

CHAPTER 5: DIVISION

COMPLETE EXERCISES SOLUTIONS KEY

This document provides the ****complete, step-by-step solutions**** for all exercises, word problems, and activities featured in Chapter 5: Division of the Grade 4 Mathematics textbook. It serves as a professional grading guide for teachers and a self-evaluation key for students. Every mathematical division in this key is verified against the fundamental division identity: **(Divisor $\times$ Quotient) + Remainder = Dividend**.

TUNE UP ACTIVITY (Page 56)

Context: Deepanita has 40 toffees and 8 friends. Her mother arranges all 40 toffees into 8 equal groups.

Questions: Each group has _____ toffees. So, she should give _____ toffees to each of her friends.

Step-by-step Solution:

- Total Toffees (Dividend) = 40
- Total Friends (Divisor) = 8
- Equal sharing is represented by division: $40 \div 8 = 5$.

Answers: Each group has **5** toffees. So, she should give **5** toffees to each of her friends.

EXERCISE 5A (Page 64)

Q1. Divide the following to find the quotients and remainders, if any:

Item	Division Expression	Dividend	Divisor	Quotient (Q)	Remainder (R)
a	$5775 \div 5$	5775	5	Q = 1155	R = 0
b	$5872 \div 4$	5872	4	Q = 1468	R = 0
c	$6781 \div 5$	6781	5	Q = 1356	R = 1
d	$8705 \div 7$	8705	7	Q = 1243	R = 4
e	$4080 \div 4$	4080	4	Q = 1020	R = 0
f	$8192 \div 6$	8192	6	Q = 1365	R = 2
g	$9174 \div 8$	9174	8	Q = 1146	R = 6
h	$6257 \div 3$	6257	3	Q = 2085	R = 2
i	$36,803 \div 2$	36,803	2	Q = 18,401	R = 1
j	$50,427 \div 3$	50,427	3	Q = 16,809	R = 0
k	$71,529 \div 5$	71,529	5	Q = 14,305	R = 4
l	$90,016 \div 7$	90,016	7	Q = 12,859	R = 3

EXERCISE 5A (Page 64) - CONTINUED

Q2. Divide the following and verify your answer:

Verification Identity: $(\text{Divisor} \times \text{Quotient}) + \text{Remainder} = \text{Dividend}$

Item	Division	Q	R	Verification Step & Check
a	$1586 \div 3$	528	2	$(3 \times 528) + 2 = 1584 + 2 = 1586$ (Correct)
b	$5442 \div 9$	604	6	$(9 \times 604) + 6 = 5436 + 6 = 5442$ (Correct)
c	$1099 \div 9$	122	1	$(9 \times 122) + 1 = 1098 + 1 = 1099$ (Correct)
d	$5241 \div 9$	582	3	$(9 \times 582) + 3 = 5238 + 3 = 5241$ (Correct)
e	$8749 \div 4$	2187	1	$(4 \times 2187) + 1 = 8748 + 1 = 8749$ (Correct)
f	$8745 \div 6$	1457	3	$(6 \times 1457) + 3 = 8742 + 3 = 8745$ (Correct)
g	$35,833 \div 7$	5119	0	$(7 \times 5119) + 0 = 35,833 + 0 = 35,833$ (Correct)
h	$40,041 \div 5$	8008	1	$(5 \times 8008) + 1 = 40,040 + 1 = 40,041$ (Correct)
i	$10,032 \div 7$	1433	1	$(7 \times 1433) + 1 = 10,031 + 1 = 10,032$ (Correct)
j	$12,470 \div 5$	2494	0	$(5 \times 2494) + 0 = 12,470 + 0 = 12,470$ (Correct)
k	$60,006 \div 9$	6667	3	$(9 \times 6667) + 3 = 60,003 + 3 = 60,006$ (Correct)
l	$21,397 \div 8$	2674	5	$(8 \times 2674) + 5 = 21,392 + 5 = 21,397$ (Correct)

EXERCISE 5B (Page 66) - Division by 2-Digit Divisors

Q1. Divide the following to find the quotients and remainders, if any:

Item	Division Expression	Q	R	Item	Division Expression	Q	R
a	$672 \div 12$	56	0	i	$4000 \div 20$	200	0
b	$468 \div 11$	42	6	j	$7320 \div 12$	610	0
c	$375 \div 16$	23	7	k	$5462 \div 11$	496	6
d	$418 \div 17$	24	10	l	$2173 \div 14$	155	3
e	$365 \div 26$	14	1	m	$2064 \div 22$	93	18
f	$246 \div 19$	12	18	n	$5442 \div 16$	340	2
g	$547 \div 32$	17	3	o	$7217 \div 17$	424	9
h	$896 \div 33$	27	5	p	$6053 \div 23$	263	4

EXERCISE 5B (Page 66) - CONTINUED

Q2. Divide the following and verify your answer:

Item	Division	Q	R	Verification Step & Check
a	$596 \div 14$	42	8	$(14 \times 42) + 8 = 588 + 8 = 596$ (Correct)
b	$404 \div 19$	21	5	$(19 \times 21) + 5 = 399 + 5 = 404$ (Correct)
c	$909 \div 29$	31	10	$(29 \times 31) + 10 = 899 + 10 = 909$ (Correct)
d	$597 \div 15$	39	12	$(15 \times 39) + 12 = 585 + 12 = 597$ (Correct)
e	$7505 \div 23$	326	7	$(23 \times 326) + 7 = 7498 + 7 = 7505$ (Correct)
f	$6004 \div 60$	100	4	$(60 \times 100) + 4 = 6000 + 4 = 6004$ (Correct)
g	$5899 \div 82$	71	77	$(82 \times 71) + 77 = 5822 + 77 = 5899$ (Correct)
h	$9567 \div 35$	273	12	$(35 \times 273) + 12 = 9555 + 12 = 9567$ (Correct)
i	$8943 \div 12$	745	3	$(12 \times 745) + 3 = 8940 + 3 = 8943$ (Correct)
j	$8903 \div 45$	197	38	$(45 \times 197) + 38 = 8865 + 38 = 8903$ (Correct)
k	$13,672 \div 12$	1139	4	$(12 \times 1139) + 4 = 13,668 + 4 = 13,672$ (Correct)
l	$26,008 \div 23$	1130	18	$(23 \times 1130) + 18 = 25,990 + 18 = 26,008$ (Correct)

EXERCISE 5C (Page 67) - Mental Division by 10, 100, 1000

Q1. Find the quotient and remainder without actual division:

Item	Division Expression	Quotient (Q)	Remainder (R)	Rule Applied
a	$753 \div 10$	75	3	Div by 10: Last 1 digit is remainder, rest is quotient.
b	$9870 \div 10$	987	0	Div by 10: Last 1 digit is remainder, rest is quotient.
c	$5017 \div 10$	501	7	Div by 10: Last 1 digit is remainder, rest is quotient.
d	$68,508 \div 1000$	68	508	Div by 1000: Last 3 digits form remainder.
e	$632 \div 100$	6	32	Div by 100: Last 2 digits form remainder.
f	$7718 \div 1000$	7	718	Div by 1000: Last 3 digits form remainder.
g	$5601 \div 1000$	5	601	Div by 1000: Last 3 digits form remainder.
h	$92,003 \div 100$	920	3	Div by 100: Last 2 digits form remainder.
i	$1000 \div 100$	10	0	Div by 100: Last 2 digits form remainder.
j	$3939 \div 1$	3939	0	Division by 1: Dividend is unchanged, remainder is 0.
k	$8956 \div 1000$	8	956	Div by 1000: Last 3 digits form remainder.
l	$4589 \div 10$	458	9	Div by 10: Last 1 digit is remainder.
m	$0 \div 9502$	0	0	Division of 0 by any number is always 0.
n	$76,034 \div 1000$	76	34	Div by 1000: Last 3 digits form remainder (034 = 34).
o	$64,030 \div 1000$	64	30	Div by 1000: Last 3 digits form remainder (030 = 30).
p	$68,508 \div 1000$	68	508	Div by 1000: Last 3 digits form remainder.

EXERCISE 5D (Page 68) - Real Life Word Problems

Question 1: Five professors travel from Kolkata to Patna by train. The total ticket bill is ₹ 19,845. How much does each professor pay?

Solution:

- Total money paid for train tickets = ₹ 19,845
- Number of professors sharing the bill = 5
- Share of each professor = ₹ $19,845 \div 5$
- Step-by-step Division:
 1. $19 \div 5 = 3$ with R = 4 (write 3 in Thousands place)
 2. $48 \div 5 = 9$ with R = 3 (write 9 in Hundreds place)
 3. $34 \div 5 = 6$ with R = 4 (write 6 in Tens place)
 4. $45 \div 5 = 9$ with R = 0 (write 9 in Ones place)
- Quotient = 3969, Remainder = 0.

Answer: Each professor has to pay ₹ **3,969**.

Question 2: One hour is made up of 60 minutes. How many hours are there in 1500 minutes?

Solution:

- Total minutes = 1500
- Minutes in 1 hour = 60
- Total hours = $1500 \div 60$
- We can simplify by dividing both by 10 (or crossing out a zero): $150 \div 6$
 1. $15 \div 6 = 2$ with R = 3 (write 2 in Tens place)
 2. $30 \div 6 = 5$ with R = 0 (write 5 in Ones place)
- Quotient = 25, Remainder = 0.

Answer: There are exactly **25 hours** in 1500 minutes.

Question 3: The total expenses for a month were shared by four students living in a flat. How much money will each one have to contribute if the bill was ₹ 9460?

Solution:

- Total month bill = ₹ 9,460
- Number of students living in the flat = 4
- Contribution of each student = ₹ $9,460 \div 4$
- Division Steps:
 1. $9 \div 4 = 2$ with R = 1. Bring down 4 to make 14.
 2. $14 \div 4 = 3$ with R = 2. Bring down 6 to make 26.
 3. $26 \div 4 = 6$ with R = 2. Bring down 0 to make 20.
 4. $20 \div 4 = 5$ with R = 0.
- Quotient = 2365, Remainder = 0.

Answer: Each student will have to contribute ₹ **2,365**.

Question 4: During a trek, the people covered 15 km in a day. The total length of the trek was 285 km. How many days did the people take to complete the trek?

Solution:

- Total length of the trek = 285 km
- Distance covered in 1 day = 15 km
- Total days taken to complete the trek = $285 \div 15$
- Division Steps:
 1. $28 \div 15 = 1$ with R = 13. Bring down 5 to make 135.
 2. $135 \div 15 = 9$ (since $15 \times 9 = 135$) with R = 0.
- Quotient = 19, Remainder = 0.

Answer: The trekkers took **19 days** to complete the trek.

Question 5: 1178 pairs of socks have to be packed into boxes. 65 pairs of socks can be packed into one box. Find the number of boxes required to pack them and the number of pairs of socks left out.

Solution:

- Total pairs of socks = 1178
- Capacity of 1 box = 65 pairs
- Boxes required & remainder = $1178 \div 65$
- Division Steps:
 1. Compare 11 with 65. Not enough. Compare 117 with 65.
 2. $117 \div 65 = 1$ with R = 52. Bring down 8 to make 528.
 3. $528 \div 65$. Let's estimate: $65 \times 8 = 520$. 520 is less than 528.
 4. $528 - 520 = 8$. So quotient is 8 and remainder is 8.
- Quotient = 18, Remainder = 8.

Answer: **18 boxes** are required to pack the socks, and **8 pairs** of socks will be left out.

Question 6: Students of a class collected packets of biscuits for the people affected by floods. These biscuits were packed into cartons. Each carton contains 12 packets of biscuits and there were 160 such packets. Find the number of cartons packed. How many packets were left over?

Solution:

- Total biscuit packets collected = 160
- Packets per carton = 12
- Cartons packed & leftovers = $160 \div 12$
- Division Steps:
 1. $16 \div 12 = 1$ with R = 4. Bring down 0 to make 40.
 2. $40 \div 12 = 3$ with R = 4 (since $12 \times 3 = 36$, and $40 - 36 = 4$).
- Quotient = 13, Remainder = 4.

Answer: **13 cartons** were packed, and **4 packets** of biscuits were left over.

EXERCISE 5E (Page 69) - Estimating the Quotient

Q1. Estimate the quotient for the following by rounding off to the nearest Ten:

Item	Original Division	Dividend Rounded to 10	Divisor Rounded to 10	Estimated Division Process	Estimated Quotient
a	$436 \div 8$	$436 \rightarrow 440$	$8 \rightarrow 10$	$440 \div 10$	44
b	$9927 \div 31$	$9927 \rightarrow 9930$	$31 \rightarrow 30$	$9930 \div 30$	331
c	$161 \div 19$	$161 \rightarrow 160$	$19 \rightarrow 20$	$160 \div 20$	8
d	$495 \div 46$	$495 \rightarrow 500$	$46 \rightarrow 50$	$500 \div 50$	10
e	$8403 \div 41$	$8403 \rightarrow 8400$	$41 \rightarrow 40$	$8400 \div 40$	210

Q2. Estimate the quotient for the following by rounding off to the nearest Hundred:

Item	Original Division	Dividend Rounded to 100	Divisor Rounded to 100	Estimated Division Process	Estimated Quotient
a	$346 \div 87$	$346 \rightarrow 300$	$87 \rightarrow 100$	$300 \div 100$	3
b	$2799 \div 131$	$2799 \rightarrow 2800$	$131 \rightarrow 100$	$2800 \div 100$	28
c	$871 \div 94$	$871 \rightarrow 900$	$94 \rightarrow 100$	$900 \div 100$	9
d	$595 \div 169$	$595 \rightarrow 600$	$169 \rightarrow 200$	$600 \div 200$	3
e	$4803 \div 104$	$4803 \rightarrow 4800$	$104 \rightarrow 100$	$4800 \div 100$	48

EXERCISE 5F (Page 70) - Mixed Operations (DMAS)

Q1. A fruit vendor bought 759 mangoes. During packing, 23 mangoes were damaged. He then arranged the remaining mangoes in 32 rows. How many mangoes were there in each row?

Solution Step-by-Step:

- Total mangoes bought = 759
- Damaged mangoes (to be removed) = 23
- Remaining good mangoes = $759 - 23 = 736$
- Number of rows to arrange them = 32 rows
- Mangoes per row = $736 \div 32$
- Let's divide 736 by 32:
 1. $73 \div 32 = 2$ with R = 9 (since $32 \times 2 = 64$, and $73 - 64 = 9$)
 2. Bring down 6 to make 96.
 3. $96 \div 32 = 3$ with R = 0 (since $32 \times 3 = 96$)
- Quotient = 23, Remainder = 0.

Answer: There were **23 mangoes** in each row.

EXERCISE 5F (Page 70) - CONTINUED

Q2. Apply the DMAS rule to simplify the following:

Rule: Division (D) → Multiplication (M) → Addition (A) → Subtraction (S)

Item	Expression	Detailed Step-by-Step Operations	Final Answer
a	$27 \div 9 \times 2 - 4 + 10$	1. Division: $27 \div 9 = 3 \rightarrow$ expr becomes $3 \times 2 - 4 + 10$ 2. Multiplication: $3 \times 2 = 6 \rightarrow 6 - 4 + 10$ 3. Addition/Subtraction: Rearrange: $6 + 10 - 4 = 16 - 4 = 12$	12
b	$7 - 4 + 5 \times 6 \div 3$	1. Division: $6 \div 3 = 2 \rightarrow 7 - 4 + 5 \times 2$ 2. Multiplication: $5 \times 2 = 10 \rightarrow 7 - 4 + 10$ 3. Addition/Subtraction: Rearrange: $7 + 10 - 4 = 17 - 4 = 13$	13
c	$6 + 12 \div 6 \times 3 - 5$	1. Division: $12 \div 6 = 2 \rightarrow 6 + 2 \times 3 - 5$ 2. Multiplication: $2 \times 3 = 6 \rightarrow 6 + 6 - 5$ 3. Addition/Subtraction: $12 - 5 = 7$	7
d	$33 + 14 \div 7 - 8$	1. Division: $14 \div 7 = 2 \rightarrow 33 + 2 - 8$ 2. Addition/Subtraction: $35 - 8 = 27$	27
e	$36 \div 4 + 5 \times 18 \div 2$	1. Division: $36 \div 4 = 9$ and $18 \div 2 = 9 \rightarrow 9 + 5 \times 9$ 2. Multiplication: $5 \times 9 = 45 \rightarrow 9 + 45$ 3. Addition: $9 + 45 = 54$	54
f	$32 + 2 \times 25 \div 5 - 12$	1. Division: $25 \div 5 = 5 \rightarrow 32 + 2 \times 5 - 12$ 2. Multiplication: $2 \times 5 = 10 \rightarrow 32 + 10 - 12$ 3. Addition/Subtraction: $42 - 12 = 30$	30
g	$15 + 42 \div 6 - 2 \times 3$	1. Division: $42 \div 6 = 7 \rightarrow 15 + 7 - 2 \times 3$ 2. Multiplication: $2 \times 3 = 6 \rightarrow 15 + 7 - 6$ 3. Addition/Subtraction: $22 - 6 = 16$	16
h	$11 \times 6 - 81 \div 9 + 43$	1. Division: $81 \div 9 = 9 \rightarrow 11 \times 6 - 9 + 43$ 2. Multiplication: $11 \times 6 = 66 \rightarrow 66 - 9 + 43$ 3. Addition/Subtraction: Rearrange: $66 + 43 - 9 = 109 - 9 = 100$	100
i	$121 \div 11 \times 10 + 34 - 72$	1. Division: $121 \div 11 = 11 \rightarrow 11 \times 10 + 34 - 72$ 2. Multiplication: $11 \times 10 = 110 \rightarrow 110 + 34 - 72$ 3. Addition/Subtraction: $144 - 72 = 72$	72

CHAPTER WORKOUT (Page 71)

Q1. Calculate the quotient and the remainder:

Item	Division Expression	Q	R	Item	Division Expression	Q	R
a	$586 \div 3$	195	1	g	$48,959 \div 87$	562	65
b	$8565 \div 8$	1070	5	h	$37,453 \div 18$	2080	13
c	$3433 \div 9$	381	4	i	$98,755 \div 75$	1316	55
d	$4578 \div 7$	654	0	j	$83,489 \div 33$	2529	32
e	$6354 \div 45$	141	9	k	$34,950 \div 25$	1398	0
f	$87,649 \div 23$	3810	19	l	$87,347 \div 92$	949	39

Q2. Find the quotient and remainder without actual division of numbers:

Item	Division	Q	R	Item	Division	Q	R
a	$1236 \div 10$	123	6	e	$89,364 \div 1$	89364	0
b	$3754 \div 100$	37	54	f	$93,844 \div 100$	938	44
c	$73,456 \div 1000$	73	456	g	$12,334 \div 10$	1233	4
d	$0 \div 3756$	0	0	h	$75,577 \div 100$	755	77

Q3. Solve them and verify the answers:

Item	Division Expression	Q	R	Verification Formula & Check
a	$9565 \div 44$	217	17	$(44 \times 217) + 17 = 9548 + 17 = 9565$ (Correct)
b	$9294 \div 76$	122	22	$(76 \times 122) + 22 = 9272 + 22 = 9294$ (Correct)
c	$8342 \div 59$	141	23	$(59 \times 141) + 23 = 8319 + 23 = 8342$ (Correct)
d	$7632 \div 35$	218	2	$(35 \times 218) + 2 = 7630 + 2 = 7632$ (Correct)

CHAPTER WORKOUT (Pages 71-72) - CONTINUED

Q4. Simplify the following (DMAS):

Item	Expression	DMAS Operation Breakdown	Final Value
a	$8 + 56 \div 8 \times 3 - 5$	1. Division: $56 \div 8 = 7 \rightarrow 8 + 7 \times 3 - 5$ 2. Multiplication: $7 \times 3 = 21 \rightarrow 8 + 21 - 5$ 3. Add/Sub: $29 - 5 = 24$	24
b	$15 \div 5 \times 4 - 4 + 9$	1. Division: $15 \div 5 = 3 \rightarrow 3 \times 4 - 4 + 9$ 2. Multiplication: $3 \times 4 = 12 \rightarrow 12 - 4 + 9$ 3. Add/Sub: Rearrange: $12 + 9 - 4 = 21 - 4 = 17$	17
c	$5 \times 10 - 25 \div 5$	1. Division: $25 \div 5 = 5 \rightarrow 5 \times 10 - 5$ 2. Multiplication: $5 \times 10 = 50 \rightarrow 50 - 5$ 3. Subtraction: $50 - 5 = 45$	45
d	$21 + 96 \div 12 - 4$	1. Division: $96 \div 12 = 8 \rightarrow 21 + 8 - 4$ 2. Add/Sub: $29 - 4 = 25$	25
e	$84 \div 7 + 32 - 2 \times 7$	1. Division: $84 \div 7 = 12 \rightarrow 12 + 32 - 2 \times 7$ 2. Multiplication: $2 \times 7 = 14 \rightarrow 12 + 32 - 14$ 3. Add/Sub: $44 - 14 = 30$	30
f	$144 \div 12 \times 5 - 60$	1. Division: $144 \div 12 = 12 \rightarrow 12 \times 5 - 60$ 2. Multiplication: $12 \times 5 = 60 \rightarrow 60 - 60$ 3. Subtraction: $60 - 60 = 0$	0

Q5. If 40 people can travel in a bus, then how many buses are required for 2680 people?

Solution:

- Total passengers = 2680 people
- Capacity of 1 bus = 40 people
- Number of buses needed = $2680 \div 40$
- Mental Shortcut: $268 \div 4$. Let's divide: $26 \div 4 = 6$ with R = 2. Bring down 8. $28 \div 4 = 7$.
- Quotient = 67, Remainder = 0.

Answer: Exactly **67 buses** are required for 2680 people.

Workout Word Problems (Page 72):

Question 6: A multiplex has 19 halls for screening movies. If all the halls have equal number of seats with a combined seating capacity of 1425, find the seating capacity of each hall.

Solution: Total capacity = 1425 seats. Total halls = 19. Seats per hall = $1425 \div 19$.

• Division: Compare 14 with 19 (not enough). Compare 142 with 19.

1. $19 \times 7 = 133$. So write 7 in Tens place. Remainder is $142 - 133 = 9$. Bring down 5 to make 95.

2. $19 \times 5 = 95$. So write 5 in Ones place. Remainder is 0.

• Quotient = 75, Remainder = 0.

Answer: The seating capacity of each hall is **75 seats**.

Question 7: 2640 notebooks are distributed equally among 24 children. How many notebooks does each child get?

Solution: Total notebooks = 2640. Number of children = 24. Notebooks per child = $2640 \div 24$.

• Division:

1. $26 \div 24 = 1$ with R = 2. Bring down 4 to make 24.

2. $24 \div 24 = 1$ with R = 0. Bring down 0 to make 0.

3. $0 \div 24 = 0$ with R = 0.

• Quotient = 110, Remainder = 0.

Answer: Each child gets **110 notebooks**.

CHAPTER WORKOUT (Page 72) - CONTINUED

Question 8: Estimate the quotient for the following by rounding off to the nearest Hundred:

a) $6570 \div 78$ b) $5357 \div 231$ c) $8761 \div 119$ d) $3458 \div 146$

Solutions:

• a) $6570 \div 78 \rightarrow$ Round 6570 to nearest hundred = 6600. Round 78 to nearest hundred = 100.

Estimated Division: $6600 \div 100 = 66$.

• b) $5357 \div 231 \rightarrow$ Round 5357 to nearest hundred = 5400. Round 231 to nearest hundred = 200.

Estimated Division: $5400 \div 200 = 27$.

• c) $8761 \div 119 \rightarrow$ Round 8761 to nearest hundred = 8800. Round 119 to nearest hundred = 100.

Estimated Division: $8800 \div 100 = 88$.

• d) $3458 \div 146 \rightarrow$ Round 3458 to nearest hundred = 3500. Round 146 to nearest hundred = 100.

Estimated Division: $3500 \div 100 = 35$.

Question 9: Divide the largest 5-digit number by the largest 2-digit number to find the quotient and remainder of the division.

Solution:

• Largest 5-digit number = 99,999

• Largest 2-digit number = 99

• Division: $99,999 \div 99$

• Steps:

1. $99 \div 99 = 1$ with R = 0. Bring down 9.

2. $9 \div 99 = 0$ with R = 9. Bring down 9 to make 99.

3. $99 \div 99 = 1$ with R = 0. Bring down 9.

4. $9 \div 99 = 0$ with R = 9.

• Quotient = 1010, Remainder = 9.

Answer: Quotient = **1010**, Remainder = **9**. Verification check: $(99 \times 1010) + 9 = 99,990 + 9 = 99,999$.

Question 10: In a race, the participants need to cover 1530 metres in 15 laps. How much distance is covered in each lap?

Solution: Total distance = 1530 m. Number of laps = 15. Distance in each lap = $1530 \div 15$.

• Division Steps:

1. $15 \div 15 = 1$ with R = 0. Bring down 3.

2. $3 \div 15 = 0$ with R = 3. Bring down 0 to make 30.

3. $30 \div 15 = 2$ with R = 0.

• Quotient = 102, Remainder = 0.

Answer: The distance covered in each lap is **102 metres**.

Question 11: Lalitha wants to buy a decorative-bordering material for her saree. A roll of 25 metres of that material would cost ₹ 700. How much does she have to pay for 9 metres of that material?

Solution (Unitary Method):

- Cost of 25 metres of bordering material = ₹ 700

- Cost of 1 metre of material = ₹ $700 \div 25$

Let's calculate: $70 \div 25 = 2$ with R = 20. Bring down 0. $200 \div 25 = 8$.

So, cost per metre = ₹ 28.

- Cost of 9 metres of material = Cost per metre $\times 9$ = ₹ 28×9

Calculation: $28 \times 9 = (20 \times 9) + (8 \times 9) = 180 + 72 = ₹ 252$.

Answer: Lalitha has to pay ₹ **252** for 9 metres of material.

MENTAL MATHS & ENRICHMENT (Page 73-74)

Q1. Find the quotient of the following using the short division method:

Item	Mental Division	Quotient (Q)	Item	Mental Division	Quotient (Q)
a	$48 \div 2$	Q = 24	f	$7714 \div 7$	Q = 1102
b	$248 \div 2$	Q = 124	g	$71,421 \div 7$	Q = 10,203
c	$369 \div 3$	Q = 123	h	$51,015 \div 5$	Q = 10,203
d	$12,012 \div 6$	Q = 2002	i	$61,224 \div 6$	Q = 10,204
e	$1010 \div 5$	Q = 202	j	$91,827 \div 9$	Q = 10,203

HOTS - HIGHER ORDER THINKING SKILLS (Page 74):

Question: The seats in a stadium were arranged in such a way that each stand had 15 rows of 20 seats each. If the capacity of the stadium is 3600, how many stands are there?

Step-by-Step Solution:

1. First, find the number of seats in 1 stand:

Seats per stand = $15 \text{ rows} \times 20 \text{ seats/row} = \mathbf{300 \text{ seats per stand.}}$

2. Find the total number of stands in the stadium:

Number of stands = $\text{Total capacity} \div \text{Seats per stand}$

Number of stands = $3600 \div 300$

3. Simplify: $36 \div 3 = 12$.

Answer: There are exactly **12 stands** in the stadium.

LIFE SKILLS AND VALUES (Page 74):

Question: Rahul collected 540 pencils to give to the children of all the domestic helpers of his complex on his birthday. There are 15 such children. How many pencils will each child get?

Step-by-Step Solution:

- Total pencils collected = 540 pencils

- Total children = 15 children

- Pencils per child = $540 \div 15$

- Division Steps:

1. Compare 54 with 15. $15 \times 3 = 45$. Write 3 in Tens place. Remainder is $54 - 45 = 9$. Bring down 0 to make 90.

2. $90 \div 15 = 6$ (since $15 \times 6 = 90$). Write 6 in Ones place. Remainder is 0.

- Quotient = 36, Remainder = 0.

Answer: Each child will get **36 pencils**.
