Ch- The Southern Plateau

Grade: IV

Name: _____

Section: _____

Roll No: _____

I. Fill in the blanks

i. A high, flat landform is called a _____.

ii. A plateau is also called a _____.

iii. The Southern Plateau is also known as the _____ Plateau.

iv. The _____ River separates the Central Highlands from the Deccan Plateau.

v. The Southern Plateau has two main divisions: _____ and _____.

vi. The _____ Plateau is rich in minerals.

vii. _____ is the highest peak of the Deccan Plateau.

II. Choose the correct answer

i. The Southern Plateau is mainly found in:

- a) Northern India
- b) Peninsular India
- c) Coastal India

ii. The Deccan Plateau lies mainly to the _____ of the Narmada.

- a) North
- b) South
- c) East

iii. Which is a major river of the plateau?

- a) Godavari
- b) Yamuna
- c) Sutlej

iv. Which soil is suitable for growing cotton?

- a) Black soil**
- b) Sandy soil**
- c) Desert soil**

v. Which is a mineral?

- a) Rice**
- b) Coal**
- c) Cotton**

III. Match the following

A

B

i. Narmada

a. Cotton

ii. Malwa Plateau

b. Highest peak

iii. Chota Nagpur Plateau

c. Divides the plateau

iv. Anamudi

d. Minerals

v. Black soil

e. Central Highlands

IV. Answer briefly

i. Why is a plateau called a tableland?

ii. Name the two divisions of the Southern Plateau.

iii. Name any two rivers of the plateau.

iv. Name any two crops grown in the plateau region.

v. Name any two minerals found in the plateau region.

vi. Name any two states of the Southern Plateau.

V. Think and answer

i. How do soil and rainfall affect farming in the plateau region?

ii. How do minerals help in the growth of industries?

iii. How do the physical features of the Southern Plateau affect people's occupations and lifestyle?

iv. Why is the Southern Plateau important to India?

I. What is a Plateau?

- A plateau is a high, flat land.
- It looks like a table, so it is also called a tableland.
- The Southern Plateau is also called the Peninsular Plateau.

II. Location

- The Southern Plateau is in southern and central India.
- The Narmada River divides it into two main parts:
 - Central Highlands
 - Deccan Plateau

III. Central Highlands

- The Central Highlands lie mainly north of the Narmada River.

- The Malwa Plateau is an important part of the Central Highlands.
- The Chota Nagpur Plateau is rich in minerals.

IV. Deccan Plateau

- The Deccan Plateau lies mainly south of the Narmada River.
- It is the largest part of the Southern Plateau.
- The Anamudi is its highest peak.

V. Rivers

Important rivers of the plateau include:

- Narmada
- Godavari
- Krishna
- Kaveri
- Tungabhadra

These rivers provide water for farming and other activities.

VI. Soil and Crops

Different types of soil are found in the plateau.

- Black soil → good for growing cotton
- Other crops include millets, groundnut, sugarcane and pulses.

VII. Minerals and Industries

The plateau is rich in minerals such as:

- Coal
- Iron ore
- Manganese

Minerals provide raw materials for industries and help create jobs.

VIII. People and Occupations

People living in the plateau region mainly depend on:

- Farming
- Mining
- Animal rearing
- Industries

The land, soil, rivers and minerals influence how people live and work.
